

**INCIDENT MANAGEMENT SITUATION REPORT**  
**FRIDAY JUNE 20, 2003 - 0530 MDT**  
**NATIONAL PREPAREDNESS LEVEL 2**

**CURRENT SITUATION:**

Initial attack activity was light nationally with 161 new fires reported. Four new large fires were reported, two in the Southwest, one each in Southern California and Western Great Basin Area. Three large fires were contained, one in Southern California and two in Alaska. Very high to extreme fire indices were reported in Arizona, Colorado, Idaho, Nevada, New Mexico, Oklahoma, Texas, Utah, and Wyoming.

**SOUTHWEST AREA LARGE FIRES:**

ASPEN, Coronado National Forest. A Type 1 Incident Management Team (Humphrey) is assigned. This fire is burning in timber with heavy ground fuels near the town of Summer Haven, AZ. Extreme fire behavior was observed, with torching and spotting over one quarter mile. The fire area continues to expand significantly. The fire is well established in Sabino Canyon in the area of Summerhaven and Loma Linta. Fire intensity has prohibited accurate evaluation of structural damage.

CHERRY, Prescott National Forest. A Type 1 Incident Management Team (Oltrogge) is assigned. This fire is burning in chaparral and oak north of the town of Cherry, AZ. Red Flag conditions for high winds tested all control lines. Resources continue to mop up, patrol and hold control lines.

PICTURE, Tonto National Forest. A Type 2 Incident Management Team (Philbin) is assigned. This fire is burning in ponderosa pine, chaparral and juniper ten miles northeast of Tonto Basin, AZ. Active fire behavior was observed, with rapid rates of spread and long range spotting. The fire made a two mile run to the north/northwest.

LIZARD, Coconino National Forest. This fire is burning in pinyon pine and juniper, nine miles southeast of Flagstaff, AZ. The fire was less active due to favorable weather conditions; gusty winds associated with thunderstorms did generate some flare-ups. Continued patrol and mop up along the fire perimeter are planned for today.

HELEN 2, Saguaro National Park. A Type 2 Incident Management Team (Raley) is assigned. This lightning caused fire is burning in thick timber near Tucson, AZ. Limited access and steep difficult terrain are hampering containment efforts. Moderate fire activity with occasional runs was observed.

DRY LAKES COMPLEX, Gila National Forest. A Fire Use Management Team (Goheen) is assigned. This lightning caused Wildland Fire Use complex, comprised of the Dry, Lake, Sycamore, and Moonshine fires, are 27 miles northwest of Silver City, NM. The complex is being managed to accomplish resource objectives. Increased fire behavior with spread through surface fuels was observed in pinyon pine, ponderosa pine, grass, and mixed stands of conifer. Resources will continue hot spotting on the northern perimeter of the Moonshine Fire.

POWELL, Grand Canyon National Park. A Fire Use Management Team (Kitchen) is assigned. This lightning caused Wildland Fire Use fire is burning in timber with heavy ground fuels 23 miles northwest of Grand Canyon Village, AZ. Fire behavior observed was primarily backing fire with occasional single and multiple tree torching.

PICACHO RESERVOIR, State of Arizona. This fire is in grass and brush, eight miles north of Picacho, AZ. Minimal fire behavior was observed, with slow backing fire along the east perimeter. Monitoring of the fire will continue today.

MORGAN, Gila National Forest. This lightning caused fire is in the Aldo Leopold Wilderness Area, 34 miles west of Truth or Consequences, NM. The fire is burning in ponderosa pine, grass and mixed conifer with heavy dead and down fuels. No visible smoke was observed. The fire will be monitored by air and lookout towers.

MORMON, Coconino National Forest. This fire is in pinyon pine 19 miles southeast of Flagstaff, AZ. The fire is being managed with a confinement strategy. No new information was reported. This will be the last report unless new information is received.

## OUTLOOK:

**Red Flag Warnings:** All of Arizona for strong southwest winds and low humidity. Strong northeast winds in the northern interior of Alaska.

**Fire Weather Watch:** Southwest Wyoming in the afternoon and evening for winds, dry relative humidity and warm temperatures.

**Weather Discussion:** A strong cold front will progress across the Northern Rockies today, ushering in much cooler air to the Pacific Northwest and Western Great Basin Areas. Unstable afternoon conditions along and ahead of the front will once again lead to scattered thunderstorms. Winds will be strong along and well to the south of the front, especially in the Southwest, Great Basin and Rocky Mountain areas. In Alaska, pressure gradients will relax today, reducing northeast winds over the central and northern parts of the state.

<b>Geographic Area Weather</b>	<b>High Temperatures</b>	<b>Minimum Relative Humidity</b>	<b>Wind</b>
<b>ROCKY MOUNTAIN AREA</b> Scattered afternoon thunderstorms east, isolated dry storms west.	Upper 70s and 80s, except up to the lower 90s western Colorado.	10% to 25% in western sections, 25% to 45% east.	Southwest 15 to 30 mph western sections, southeast 15 to 25 mph in the east.
<b>EASTERN GREAT BASIN AR</b> Partly cloudy region-wide, except sunny in southern Utah. Widely scattered thunderstorms in Idaho and northern Utah.	45 to 76 in the mountains, 60 to 83 in the valleys except 93 to 100 in the valleys of southern Utah and the Arizona Strip.	30 to 70% in the mountains, 4 to 25% in the lower elevations.	West to southwest 15 to 30 mph, up to 35 mph in southern Utah.
<b>WESTERN GREAT BASIN AREA</b> A deep trough of low pressure will bring cooler temperatures and gusty winds to most of the state. Isolated thunderstorms expected in the far northeast.	70s to upper 80s at low elevations, 60s to 70s in the foothills and mountains.	7 to 15% lower elevations, 12 to 22% higher elevations, 20 to 45% in the Sierras	West 10 to 25 mph for the northern 2/3 of the state, south 5 to 15 mph in the southern 1/3 of the state.
<b>SOUTHWEST AREA</b> Windy and dry in Arizona. Otherwise, mostly sunny west and partly cloudy east. A slight chance for thunderstorms eastern New Mexico.	70s to mid 80s mountains and 80s to mid 90s lower elevations, except near 103 southwest Arizona deserts.	3 to 12% Arizona, 8 to 25% western New Mexico, 25 to 40% remainder.	Southwest 15 to 30 mph with higher gusts in Arizona, southwest 10 to 20 mph in western New Mexico. Upslope/up-valley or variable winds elsewhere 5 to 15 mph.
<b>SOUTHERN CALIFORNIA</b> Morning low clouds and fog with local drizzle to the lower coastal slopes, otherwise mostly sunny,	70 to 85 mountains and coastal valleys, 80-90 inland valleys and upper deserts, and 95 to 105 lower deserts.	30 to 45% mountains and inland valleys, 50 to 65% coastal valleys and 10 to 25% deserts.	Southwest to northwest 10 to 20 mph with higher gusts over the mountains and deserts.

<b>NORTHERN CALIFORNIA</b> Night and morning coastal fog and low clouds. Mostly sunny elsewhere with a few afternoon cumuli over the northern and eastern mountains.	60s at the coast, 60s and 70s higher elevations, and 80s to near 90 interior valleys.	50% or higher coast. Inland 28 to 40% west of the Sierra Cascade Crest and 10 to 20% east of the crest.	Northwest 7 to 15 mph with gusts to 25 to 30 mph higher elevations and coastal areas, SW to NW 5 to 10 mph with afternoon gusts to 20 mph valleys.
<b>Alaska</b> Interior Mostly sunny and breezy in the north. Partly to mostly cloudy with isolated showers and wet thunderstorms in the south.	65 to 78.	25% to 40%.	Northeast 5 to 15 mph and increasing to 20-30 in the north.

## ***EXTREME FIRE BEHAVIOR***

Extreme fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

● Discuss the following indicators of extreme fire behavior:

- Relative humidity less than 15%
- 1-hour fuel moisture less than 5%
- Trees crowning inside the fireline
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
- Approaching thunderheads with dark clouds beneath
- Presence of dust devils indicating an unstable atmosphere
- Increased spotting
- Sudden calm
- High clouds moving fast in direction different from surface wind
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
